

BP 450 AD Blister Packing Machine

ACG Pampac, presents deep draw blister packaging machines equipped with outstanding features offered for the first time in India.

The BP-450 machine has been specially developed to add value to your product with respect to packaging innovation and to optimise your investment in the machine and its change-parts. It can handle ampoules, vials, prefilled syringes, tubes and combination pack of syringe + ampoule, etc. up to a cavity depth of 28mm.

The BP-450 machine uses the proven vacuum forming technology with continuous film movement. The machine has less moving parts making it simple and more user friendly.

ACG Pampac BP-450 offers you the best combination of features, level of automation and flexibility.

Features:

- Compact machine.
- Suitable for ampoule, vial, pre - filled syringe, eye drops, combination pack, etc.
- Continuous motion helps reliable and efficient feeding at high speeds.
- Quick change over.
- Output up to 450 ampoules/minute.
