

## *Auto Labelling Machine For Self Adhesive Labels*

The vertical round bottle labeling machine is suitable for round bottle labeling in daily cosmetics, beverages, medicine and other industries.

The machine adopts the original pneumatic roller structure and has high labeling precision.

Especially suitable for round labeling of large round bottles, high repeatability, no air bubbles, special design, no need for a bottle separation mechanism, making the system simpler and more efficient. Due to the use of high-power servo motors, the label range is increased. The problem of insufficient torque of the universal labeling machine has been completely solved.

This machine is especially suitable for high-demand all-week stickers. It adopts three-roll automatic positioning method, which can greatly reduce the labeling error caused by unknown factors such as the cone of the product.

One label or two labels can be selected for one labeling, and it is possible to perform labeling before and after, such as hand sanitizer.

Advanced and friendly human-machine interface system, online help information, real human-computer interaction, easy to learn and easy to learn, workers can operate with a little training.

### **Machine specification:**

- Speed: 45m/minute
- Label width: 190mm (based on needs)
- Bottle diameter: 30-100mm
- Paper roll inner diameter:  $\Phi 76.2\text{mm}$
- Paper roll outside diameter:  $\Phi 330\text{mm}$
- Machine size: 2000×700×1400(mm)
- Machine weight: 280KG
- Power: 220V 50Hz 1200W
