

Rotary-type Container Filling System PF6

This Auger filling system provides a capability to fill a container at high speed by combination with a Rotary conveyer. The maximum speed would be 200 fillings per minutes. It is also possible to build up a high accuracy filling system by adding a correction filling station after the initial filling. There are variety of optional devices to make your complete production line, such as container feeding, capping machine, labeling machine etc.

Specifications:

Filling range	5 - 4500g
Filling speed	Max. 200 dosings/min
