

Aluminum Metal Tube Filling Sealing Machine

This machine is mainly used for quantitative filling and sealing of Aluminum Tube Metal Tube composite hoses as packaging container materials. This machine is widely used in packaging in medicine, daily chemical, food, chemical and other industries.

Operation process, manually insert the Aluminum Tube Metal Tube composite hose into the indexing coil seat (16 stations), use mechanical transmission to automatically turn the position, photoelectric detection, confirm that the tube starts to automatically measure and fill the tube, and then perform two-way four-fold sealing, the finished product is withdrawn.

Technical Parameter:

- Product name Fully automatic aluminum tube filling and sealing machine
- Production speed 10-50 pcs/min (depending on different materials and filling volume)
- Filling range 20-200ml
- Applicable tube height 80-180mm
- Applicable pipe diameter (diameter) 20-35mm
- Number of stations 16
- Voltage 220V
- Air source 0.4-0.6Mpa
- Equipment weight 380KG
