

Vertical Automatic Packing Machine

The vertical automatic packing machine is a new type of automatic zipper independent bag packaging machine developed based on the horizontal automatic packaging machine. It has a unique packaging concept, mature and advanced technology, and different unloader configurations.

Features

1. PLC full computer control system, man-machine interface, touch screen operation is simple and intuitive.
2. Servo film walking system, pneumatic control system, accurate positioning, excellent machine performance, and beautiful packaging.
3. Complete automatic alarm protection function to minimize losses.
4. This machine can automatically complete feeding, metering, filling, bag making, date and other tasks with the metering device.
5. All packaging printing and output.
6. Bag-making form: This machine can make pillow-shaped bags and perforated bags according to customer needs.

Application

The vertical automatic packaging machine can realize automatic self-supporting packaging of liquids (beverages, jams, detergents, soy sauce, etc.), powders (powders, condiments, milk powder, pesticides), and grains (seeds, sugar, grains, agricultural products, etc.), chunks (peanuts, chewing gum, potato chips, pet food, etc.). It is widely used in food, hardware, electronics, medicine, cosmetics, fertilizer, agricultural products and other industries.

Product Parameter

Product name	Vertical automatic packaging machine
Packing speed	10-80 bags/minute
Bag size	(W)50-150mm (L)50-200mm
	Up to 300 mm
Bag making method	Pillow bag, stand up bag, hole punch, connecting bag device
Maximum width of packaging film	320mm
Measuring range	Up to 500 ml
Membrane	POPP / CPP 、 POPP / VMCPP 、 BOPP / PE 、 PET / VMPET / PEPET / AL / PE 、 NEW / PE 、 PET / PET 等
membrane thickness	0.04-0.08mm
Air consumption	0.3m ³ /min 0.6Mpa
Main power/voltage	2.2kw/220v 50-60Hz
Size	(L)1300x(W)820x(H) 1400mm
Switchboard weight	250 kg
