

RH-15A Cling film Packing Sealing Machine

It is mainly used for packaging vegetables, fruits, fresh meat, cooked food, clean vegetables and other products. Its high efficiency, stability and automation can meet the needs of customers for high production.

Features

- Efficient packaging

With an average of 15 packages per minute, the packaging efficiency is about three times that of labor.

- Good packaging effect

Compared with labor, the packaging is firmer, more beautiful and unified, which helps to enhance brand value.

- Wide selection of consumables

Applicable to all kinds of plastic wrap (PVC/PE), both domestic and imported, saving cost; some foreign equipment can only use imported plastic wrap.

It can be packaged with or without pallets, and is suitable for pallets of various shapes (such as round, hexagonal, etc.)

- High-end selection

The whole machine is made of stainless steel, which is suitable for high humidity and other corrosive environments; similar foreign equipment only partially or completely does not use stainless steel.

Easily corroded under the environment.

- Comfortable operation

The interface design is concise and responds quickly, in line with Chinese aesthetics and operating habits; compared to foreign equipment, the noise is low, and special silent places are used

It is more comfortable to use.

- Superb craftsmanship

The overall welding processing, equipment stability is better than similar foreign equipment.

Specifications

Packing speed -----15 Package / minute
Package length -----80—350mm
Package width -----80—270mm
Packing height -----10—170mm
Package weight -----40g—3kg
Packaging film width -----350-500mm
