

## *Small Vertical Multi-function Packaging Machine*

The small vertical multi-function packaging machine adopts PLC control touch screen operation. The equipment is equipped with automatic measuring device for measuring cups and chain bucket mechanism for manual weighing and feeding. The two methods can not only meet the automatic measuring of uniform materials, but also meet the packaging of materials that are not suitable for automatic measuring.

### **Features:**

- 1) PLC control automatically completes all the work of measuring bag making, filling and sealing, cutting counting, batch number and so on.
- 2) Touch screen operation in Chinese and English interface, which is helpful for equipment operators to quickly familiarize with the machine operation of the equipment.
- 3) The stepper motor pulls the film and the photoelectric eye color mark positioning can easily complete the bag making operation, and the operation is stable and the noise is low.
- 4) The temperature of horizontal sealing and vertical sealing is independently controlled, and the sealing is firm and tight, and more composite films can be used as packaging materials.

### **Technical Parameters:**

- Bag size: Long 50-280 mm width 50-170 mm
- Measuring range: 20-500 ml
- Packing speed: 30-60 Bag/min
- Power: 1.8 kw
- Weight: 320 kg
- Dimensions: 650\*1200\*1950 mm
