

## *Automatic Flour Packing Machine TJ-500F*

The Automatic Flour Packing Machine is also called computer baler, automatic flour packaging machine, automatic weighing and weighing packaging machine. It is a flour packaging equipment commonly used in large and medium-sized flour mills and food companies. Can make bags, metering, filling, oxygenation, coding, bag cutting and so on. Suitable for packaging powder materials, such as flour, milk powder, monosodium glutamate, solid beverage, sugar, glucose, coffee, feed, solid medicine, powdery additives, dyes, etc.

### **Features:**

1. The Automatic Flour Packing Machine can automatically complete all work such as metering, bag making, filling, sealing, cutting and counting.
2. The Automatic Flour Packing Machine can obtain a complete logo pattern when packaging the color-coded packaging materials.
3. The Automatic Flour Packing Machine adopts stepper motor control. The system has high precision, good performance, low noise and excellent stability.
4. Sealed embedded design, has a good thermal balance, adapt to a variety of packaging materials, sealing lines clear, strong sealing.
5. The Automatic Flour Packing Machine adopts a modular design, which can achieve the purpose of multi-purpose by replacing different metering devices.
6. The Automatic Flour Packing Machine has advanced PLC control system, bilingual display in both Chinese and English. The packaging speed and the length of the bag can be adjusted steplessly within a certain range without replacing parts.

**Technical Parameter:**

<b>Model</b>	<b>TJ-500F</b>
Packing speed	20-60 bags/min
Packing volume	100-1000 ml
Making bag size	L: <300mm, W:<420mm
Film width	≤ 500 mm
Thickness of film roll	0.03-0.10mm
Packing accuracy	≤ ±1%
Power	3.0KW
Power supply	AC220V, 50/60Hz
Seal type	Pillow seal, four sides seal
Main machine net weight	800kg
Main machine dimension	L1365×W1050×H1420 mm
