

DZQ-600/2SA Supplier Bag Double-Chamber Vacuum Packing Machine

The DZQ-600/2SA double-chamber vacuum sealer is an advanced and efficient packaging device designed for vacuum sealing food, pharmaceuticals, and other products. It features two independently operated vacuum chambers, allowing users to handle multiple bags simultaneously, thereby significantly improving work efficiency and production capacity.

Product Description

Advantage

- **High Efficiency:** The double-chamber vacuum machine features two chambers, allowing simultaneous vacuum packaging in both chambers, significantly improving production efficiency and reducing waiting time, making it ideal for high-volume operations.
- **Flexible Operation:** Each chamber can be controlled independently, allowing operators to process different types of products in each chamber, which enhances flexibility and adaptability in the production process.
- **Reduced Operator Labor Intensity:** The double-chamber design allows one chamber to continue working while the other is sealing, enabling operators to perform other tasks while waiting for the vacuum sealing process to complete, thus reducing operator workload.
- **Improved Packaging Quality:** The double-chamber vacuum machine precisely controls the vacuum and sealing process, ensuring airtight seals and consistent packaging quality, which helps extend the shelf life of food or other products and maintains their freshness.
- **Space-Saving Design:** Despite offering two work chambers, the double-chamber vacuum machine typically has a compact design that doesn't occupy excessive production space, making it suitable for environments with limited space.

Description

The Double Chamber Vacuum Machine is an advanced food packaging system designed for high-volume packaging needs. Featuring two separate chambers, this machine allows for continuous and efficient packaging operations—while one chamber is being vacuumed and sealed, the other can be loaded or unloaded. This significantly increases productivity and is ideal for medium to large-scale food processing businesses, commercial kitchens, and packaging operations. The machine effectively removes air from food packaging, preserving the freshness, flavor, and nutritional value of the contents by reducing oxidation and preventing bacterial growth.

Technical Parameters

Model	DZQ-600/2SA
Voltage	110/220/380V 50-60Hz
Pump Power	1.8kw
Pump Capacity	20m ³ /h (x2) /Option
Sealing Length	600mm (x4)
Sealing Width	10mm
Chamber Size	662x546x50mm(without cover)
Dimension	1460x690x960mm
Weight	~205kgs
Certification	CE ISO
