

JFK-4000 High Power Electromagnetic Induction Aluminum Foil Sealing Machine

When the aluminum foil gasket passes through the induction coil, electromagnetic induction acts, generating eddy currents and instantaneous heating,

Tightly bond the aluminum foil to the container mouth to achieve airtight sealing.

Suitable for sealing containers of drugs, food, cosmetics, pesticides, petroleum products, chemical products, etc.

Feature

1. Non contact sealing, good sealing effect, stable
2. The sealing power can be adjusted according to the sealing speed
3. Suitable for sealing non-metallic materials such as polyethylene (PE), polyester (PET), polypropylene (PP), glass, etc
4. Can connect to existing production lines of customers

Technical Specifications:

- Power supply: single-phase 220V, 4000W
- Bottle mouth diameter: 20-60mm; 50-80mm
- Sealing speed: 0-300 bottles/minute (depending on product size)

Optional:

1. Conveyor Line
2. No aluminum foil alarm device
3. No aluminum foil removal device
