

## MKC 200S / Packaging Machine for Cartons / continuous motion

### **MKC** – the continuous high-capacity cartoning machine

Cartoning machines of the MKC-series are suitable for a wide range of packaging tasks thanks to their high quality mechanical engineering and modular design.

#### **Description**

Due to different modules in the sections product infeed, product chain, product insertion and carton closure, the machine can be optimally tailored to the customer needs. Depending on the requirement, a multi-chain system of the product chain allows for intermittent loading of the product pockets and continuous transfer into the folding carton – with an output of up to 250 cartons/minute.

#### **Highest flexibility**

- Basic machine in modular design
- A broad range of feeding systems can be installed
- All commercially available carton closure options can be installed
- Large format range
- Individual modules, offering a customized packaging solution when combined

#### **Optimal usability**

- Modern visualization via touch panel
- Simple and clearly arranged operator control
- Low machine design and flat machine front
- Ergonomic machine design offers optimal accessibility of production and control area

## Easy to maintain

- Maximum flexibility due to highly dynamic servo drives
- All safety-related machine functions with overload protection
- Modern balcony-type construction in GMP-compliant design
- Fast format changeovers with reproducible settings
