

Instant Printing Labeling Machine PA4210

It can print the product packaging information, related product code (bar code), production and serial number data, sales channel data, etc. in real time, and paste the anti-information label onto the product. The product information content can be printed by ordinary one-dimensional barcode or two-dimensional barcode.

Features & Specification

Through the communication software, you can connect to the database to print the database data in real time, and paste the printed label on the product, especially for special applications such as real-time code assignment of electronic product supervision code and product variable data printing.

A variety of labeling methods: pneumatic, blowing and other methods for users to choose, to meet the user's different occasions, different items of labeling requirements.

Flexible editing software: compatible with most Chinese/English label editing software, print content editing has great flexibility.

Extended function: It can be connected with other equipment (such as bar code reader, electronic scale, testing equipment or other industrial equipment) to form an integrated system to meet the most complex production management and logistics monitoring application requirements of users.

Flexible independent stand, easy to adjust, easy to install; the object distance is wide, reducing the need for fine-tuning during installation.

Technical Parameter:

Labeling speed: 0~10 sheets/Min	Labeling height: 750-900mm
Labeling accuracy: +/-3mm	Max: W 100 x L140mm,W 40 x L 40mm
	Power: 220V 50/60HZ 0.8KW
temperature: 0~50°C	Relative humidity: 15~90%
Air pressure: 0.4-0.6MPa	Dimensions: L100×W 800×H1800mm
Gas volume: >15L/Min	Total weight: 350Kg
