

G1WG Paste Filling Machine

This G1WG paste filling machine is of reasonable structure, reliable performance and accurate quantification. It applies pneumatically-driven structure. The shell and all the parts connected with filling materials are made of stainless steel (SS304 is used for standard ones and SS316 can also be customized). The inner walls of main parts are mirror-polished in roughness $Ra \leq 0.2-0.4 \mu m$, which conforms to the requirements of GMP certification. Therefore, it is rustles and corrosion resistant. In addition, the user can adjust the filling volume and speed within the type limitation as required.

Application

The G1WG paste filling machine is a volume type automatic cream filling machine apply to food, medicine, pesticide, chemical and other industries, can also be used for filling products with the particle. such as lubricate oil, edible oil, liquid detergent, shampoo, tomato sauce, salad sauce, etc.

The machine can be customized as per customers' exact specification and requirements. The liquid contractive parts are made of stainless steel, meeting GMP requirement.

Technical parameters

| Model | G1WG paste filling machine |
|------------------|-----------------------------------|
| Voltage | AC 220V 50Hz/ 110V 60Hz |
| Power | 20w |
| Filling speed | 5-25bottles/min |
| Air pressure | 0.4-0.6Mpa |
| Filling accuracy | -0,01 |
| Material | SS304 |
