

High Speed Automatic Chocolate Packing Line (F-Z400U)

This High speed automatic chocolate packing line has completely changed the manual materials discharging and packaging mode of traditional manufacturers since it applies fully automatic materials feeding.

The products are fed into the packaging line from the production line, which may automatically adjust the speed and position of the products, thus making the products enter into the packaging machine orderly and correctly.

Automatically control the start, stop and speed of the packaging machine according to the state of product, completely free of manual control.

High speed automatic chocolate packing line are mainly used for the folding and envelop style packing of chocolate, hard candy, pressed candy etc. in certain sizes and shapes. The model is compatible with various types of packaging materials. Meanwhile, brushing packing is also available on this model by replacing several tool parts.

The contact areas of this machine are made of stainless steel so that minimal wear and tear happens. Its control panels are very user-friendly and easy to understand. Products of varying heights can be easily adjusted with the help of end seal jaw height adjuster.
