

S71C (I) Plastic Sheet Thermoforming Machine (Standard)

We are a professional plastic sheet thermoforming machine (standard type) supplier in China. This kind of machine is mainly used to make PP, PS, PET and PE package containers for food.

Features:

1. The plastic sheet thermoforming machine adopts the cam structure that makes the machine running stable and maintain convenient.
2. Four column structure to ensure stable forming with accurate precision.
3. Chain exit device to ensure rapid mold exchange.
4. The whole machine is fully digital control.

Specifications

- Model No.: S71C (I)
- Suitable materials: PP/PS/PET/PVC/Biodegradable material
- Main motor power: 11kw
- Sheet thickness: 0.3-2.0mm
- Formed depth: ≤ 120 mm
- Work efficiency: ≤ 29 cycle/min
- Max formed area: 680 \times 390mm
- Consumed air: 3200-4000L/min
- Heating power: 108kw
