

TFC-100 Case Labelling Station

Manufacturers prefer automated systems for fast processing of production and reducing workload. Labelling stations are functional machines designed for the rapid creation of labels for cartons that facilitate storage and distribution. In order for business and data management to be successful, and to get maximum efficiency from operations, Labelling stations must also be up-to-date.

VISIOTT TPS Case Labelling Station is designed by expert engineers considering the labelling needs of bundles and all types of cartons.

VISIOTT TPS TFC-100 collectively implements labels for packaging, with the vision inspection technology integrated within the station. The SSCC label, which contains information about the products on the carton, is automatically applied to the parcel after the verification process. If there is any error at the label (SSCC) control step, the cartons leave the conveyor with the help of the reject mechanism. Verified product cartons proceed to the next stage.

TFC-100 has been built by considering all international standards. It is was designed with a transparent protection area considering operation and operator safety, and also stands out with its easy integration feature.

VISIOTT TPS TFC-100 is managed by VISIOTT TPS Line Manager (Level 2). With Line Manager software, you can manage operation information such as recipes, work orders and master data on the line. Innovative and constantly up-to-date software architecture provides the opportunity to record all operational movements and generate audit reports. You can contact us for more detailed information about the product.

Features

- It can be adjusted for packages of various sizes.
- It gets decent results by applying labels with high stability.
- It has an adjustable touchscreen and a user-friendly interface.
- It is located in a transparent protection area for operator and operational safety.
- GMP, GAMP 5 ve 21 CFR Part 11 compliant

Technical Details

Print Technology	5472 x 3648 px
Voltage / Frequency	110 V / 220 V / 50 - 60 Hz
Material	Stainless Steel
Computer*	Touch Screen Industrial Monitor
Monitor	Fanless Industrial Computer
Printer and Label Applicator	TT
