

Patty Breeding Machine SXJ200-II/SXJ400-II

This Patty breeding machine can evenly coat the meat like chicken, beef, pork, and seafood by outpouring the crumb from the hopper when the products is carried by the belt passing under it. For the bottom coating, there is a layer of crumb on the lower belt. Also there is a roller pressing sytem to press tightly the crumb onto the surface of the food and the thickness of crumb can be regulated by this unit too.

This machine coats evenly the chicken, beef, meat and seafood a top layer by outpouring the crumb from the hopper and a bottom layer while the products passing the conveyor belt.

Excellent crumbs circulation system virtually reduces the cutting of the crumb, easy to realize the standard production.

- Siemens electric apparatus, reliable protection device.
- Access to former, battering machine and fryer for a continuous production.
- Made of stainless steel, creative design, reasonable structure, and reliable performance.

Technical Parameters:

Model	SXJ200-II	SXJ400-III
	Patryy breeding machine	Patty breeding machine
Installed power	0.62kw	3.7kw
Belt speed	3~15m/min by inverter	3~15m/min by inverter
Input height	720mm	1050±50mm
Output height	780±50mm	1050±50mm
Belt width	200mm	400mm
Dimension	1720x650x1400mm	2640x1060x2300mm
