

Cap Liners Insertion Machine

This cap lining machine is widely used in food and pharmaceutical caps, in which it is necessary to insert the double-layer pads (aluminum foil and paper) into the bottom of the caps. The specially designed mold can produce a pulled piece on the aluminum foil to be easily opened.

Features:

1. Auto Cap Lining Machine is mainly used to produce the airtight top of a plastic bottle, which makes it reasonable.
2. Using PLC control system with touch human-machine interface.
3. The contact surfaces of the caps are made of stainless steel.
4. High efficiency to reduce labor
5. This cap liner machine is ideal for the production of beverages.

Product Specifications:

Product name	cap liner wadding machine
Power supply	AC380V 10% 50HZ
Power	2Kw
Air compression	30L/min
Min.cap diameter	25mm
Max.cap diameter	60mm
Min.cap height	15mm
Max.cap height	25mm
Lining speed	120caps/min
Main machine size	1100mm*900mm*1400mm
Cap lift and cap feeding device	1700mm*750mm*1200mm
Color	Gray
Weight	1100kg
