

## *Powder Bag Horizontal Form Fill and Seal Packaging Machine*

In the packing machinery field, Powder Bag Horizontal Form Fill and Seal Packaging Machine is a versatile and efficient solution for various industries. Efficiency, accuracy, and cost-effectiveness are some of the benefits this machine offers in automating the packaging of powdered products. This guidebook aims to take a look at the working processes, applications, functions, benefits, roles, and advantages of a 30g Powder Bag Horizontal Form Fill and Seal Packaging Machine.

### **Technical Specification**

<b>Parameter</b>	<b>Specification</b>
Product Type	Powder
Bag Type	Horizontal Form Fill And Seal
Packaging Capacity	Up to 30g
Packaging Speed	Varies based on product and settings
Bag Width	Adjustable
Bag Length	Adjustable
Packaging Material	Heat-sealable films such as polyethylene or laminates
Power Supply	AC 220V/50Hz or 110V/60Hz, Single Phase
Power Consumption	Depends on machine size and configuration
Control System	PLC (Programmable Logic Controller) with touchscreen HMI
Machine Material	Stainless Steel

Weight	Varies based on machine size and configuration
Dimensions (L x W x H)	Varies based on machine size and configuration
Optional Features	– Date coding
	– Gas flushing (for modified atmosphere packaging)
	– Dust collection system
	– Automatic feeding system for product
	– Automatic weighing system for precise filling
