

## ***NJP-200C/400C/800C Automatic Capsule Filling Machine***

NJP-200C/400C/800C automatic capsule filling machine is suitable for filling various capsules. It can automatically complete positioning, separating, filling, waste capsule rejecting, locking and finished capsule ejecting. This automatic capsule filler is the ideal equipment for filling capsules especially in medium and small pharmaceutical factory, hospital preparation lab, and so on.

### **Features**

1. Automatic capsule filling machine adopts programmable control system, touch panel operation and electronic automatic counter. It will automatically alarm for lacking of capsules and stop when there is not sufficient medicine powder.
2. Capsule qualified rate of this automatic capsule filler is more than 99% with precise dosage.
3. It is featured with new closed structure, small volume, low energy consumption, simplification in changing modules and easy operation and cleaning.
4. The turning-around parts are fully enclosed having excellent lubricating conditions. Without old spots on the working bench, automatic capsule filling machine avoids cross pollution with medicines.
5. This automatic capsule filler reduces labor strength and improves production efficiency. It is fabricated in accordance with the requirement of CE and GMP standards.
6. Key bearing parts and electronic equipment are from international famous suppliers and are featured with stable performance. They can run at a high speed. All contacting parts with powder are made of high-quality stainless steel.

## Parameters

Type	NJP-200C	NJP-400C	NJP-800C
Output	200 capsule/min	400 capsule/min	800 capsule/min
No. of Segment Bores	2	6	6
Suitable for Capsule Size	00#4#		
Total Powder	3 kW	3 kW	5 kW
Overall Weight	700 kg	700 kg	1100 kg
Overall Dimension (mm)	700 × 800 × 1700	700 × 800 × 900	840 × 960 × 1800
