

SHH-400 Automatic Capsule Filling Machine

This capsule filling Machine is suitable for filling various domestic or imported capsules. This machine is controlled by a combination of electricity and gas. It is equipped with an electronic automatic counting device, which can automatically complete the positioning, separation, filling, and locking of the capsules respectively, reducing labor intensity, improving production efficiency, and meeting the requirements of pharmaceutical hygiene. This machine is sensitive in action, accurate in filling dose, novel in structure, beautiful in appearance, and convenient in operation. It is the ideal equipment for filling capsules with the latest technology in the pharmaceutical industry.

Features:

- New machine design, High-end atmosphere.
- Reduced the machine working table height, reduced the machine running center of gravity, more stable when fast speed running.
- Adopted inner cam design, removed spring drive, less noise, solved problems caused by weak spring force.
- Adopted new design loose powder mechanism, increased the filling dosage accuracy.
- New powder collection device in powder filling station, powder can be recycled.

Technical Parameters:

| Model | SHH-400 |
|---------------------|----------------------|
| Max Output Capacity | 24 000 capsules/hour |
| Capsule Size | #00- #4 |
| Hole QTY | 3 |
| Voltage | Customized |
| Power | 3KW |
| Weight | 900KG |
| Dimension | 810×700×1840mm |
