

## ZS-C70 Carton Packing Machine

It is suitable for packing pharmaceutical aluminum plastic and other related similar content compact with automatic finish folding, forming. Opening and loading, batch number printing as well as sealing tee processes. It adopts PLC control, photoelectric try supervision to coordinate with every part, once something unexpected happens when it's operating, it can stop and display the reasons automatically, and it is convenient to solve the troubles in time. This machine can be used separately, and also can used with other blister packing machines.

### Main technical parameters of machine

Packing speed		30~70 cartons/min
Powder source		380v 50Hz
Main Motor		0.75 Kw
Compressed air	Consumption	200L/min
	Pressure	0.6MP
Weight		1000kg
Size (L*W*H) (not including the conveyor belt)		1150mm*1250mm *2220mm
Application of the carton size (L*W*H)		85mm*85mm*30mm (max)

## **Carton packing machine features:**

Machine using PLC automatic control system, using the host Frequency Electric.

Client, according to their own enterprises need, can arbitrarily adjust their packing appropriate speed in the limited scope of the speed.

Use of man-machine interface & operating system, automatically displays the speed of packing and counting. The scope of carton in the limited can be adjusted and no need to replace parts. The machine with automatic detection system, which has a failure of automatic shutdown function and has automatically, removed the waste carton functions.

Screen with fault display and troubleshooting, and can complete batch printing three rows synchronization.

The device can be used alone, can also be used with other devices to form a production line.
