

## *Pendular Granulator YK Series*

YK Series Pendular Granulator is widely used to let the wet powder developed into a desired particle and also can be used to crush the dry bulk material into the required particle in the pharmaceutical, food and chemical industry.

YK Series Pendular Granulator works by mechanical transmission to let the roller swing back and forth, the material is extruded from the screen and granulated. You can make particles with different thickness if you replace the sieve with different mesh.

It is ideal equipment for the production of small batch, granule, slice agent and capsules in pharmaceutical, chemical, food, research institutes, laboratories, hospitals and small health care products factory etc.

### **Features:**

Model	Roller Dia (mm)	Production Capacity (kg/h)	Motor Power (KW)	Roller Speed (r/min)	Swing Range	Overall Size(mm)	N. W.(kg)
<b>YK-60</b>	60	20-30	0.55	46	>360°	390×360×590	70
<b>YK-90</b>	90	50-100	0.75	46	>360°	730×400×830	150
<b>YK-160B</b>	160	200-300	3	46	>360°	900×600×1200	380
<b>YK-160C</b>	160	200-300	2.2	46	>360°	700×660×1080	205
