

RGY10*25S Gel Encapsulation Machine

RGY10×25S is a well designed rotary die encapsulate water cooling, spreading chamber and die to form all kinds of oil and liquid into variety form sort capsules in pharmaceutical food and cosmetics fields.

Adoping PLC man-machine interface frequency inverter to regulate the die rollers step-lessly, a special water cooling cycling ground has horizontal feeder system. It can complish successive capsules producing as the skin making and forming at the same time. It provides high production dfficiency, It provides high production deficiency and steady resional quacity to meet GMP standard, en-ergy saving and reached level in the word, which competed with RG2-1 wind cooling.

Technical Specifications

Stepless speek regulation	0-5 r/min
Rated rotation speed	3.5 r/min
Die dimension	Φ103*180 mm
Material supplied	2.5 ml
Dosage filling	+/- 2%
Motor	1.5KW 380V 1400 r/min
Electric heater	2000W*6pcs 220V
Electric heater sleeve	55W*6pcs 220v
Overall size	850*1100*1900 mm
Weight	1000 kg
