

RGPL-0540A

口蜡润唇膏生产线

- Characterized by high degree of automation, high yield, wide adaptability and excellent stability, RGYF-002KL.32Lip Blam Filling Line is well received by the majority of users. The current models, getting more and more sophisticated and mature, with high technical content, top quality and other features, are ideal special equipment for daily chemical and food manufacturers.
- The production line is comprised of fully automatic loader, intermittent conveyor, 4-head hot filling machine, preheating device, reheating device, cooling system, and full automatic capper etc., with automatic container loading, container body depth detection, unqualified container removal, container body preheating, container body detection, automatic filling, material cooling, material reheating, material secondary cooling, automatic capping, cap detection to achieve discharge of capped finished products and removal of uncapped products, and other features. The whole line adopts PLC control, and network cable is used to connect the devices to control the entire line.

Main technical parameters:

Production speed	30 bottles / min
Power supply voltage	380V/50Hz
Total power	20.8 kW
Outline dimensions	8650X5000X2050(MM)
Total weight	Approximately4000kg
