

Chemical Product Filling Machine

This chemical product filling machine is the main equipment of liquid production line, and it is mainly used for liquid filling of 100ml-500ml glass or plastic bottles. Its main component is cylinder filling machine.

10 pumps are designed for it, and single head filling mode is available. The air cylinder is used to control the filling, and the journey of air cylinder is adjustable according to different volumes. Single-head anti-leakage filling nozzle has been designed, and its control system has employed explosion-proof electric apparatus.

Features:

1. Liner bottle feeding mode is used to ensure feeding reliability.
2. There are no bubbles during the filling process.
3. Advanced design, compact structure, and high security.
4. Reliable performance, good corrosion resistance, good sealing capacity.
5. No special need for its maintenance.
6. With many detachable auxiliary components, this chemical product filling machine is easy to maintain and repair.

Main Parameters:

Production Capacity	400~450 bottle/hour (single head)
Bottle Size	100-500ml (glass or plastic bottle)
Loading Accuracy	+/-1%
Electric Supply	380V/50hz, 3phase
Power	2kw
Size	2400×900×1600mm
