

Sachet Water Auto Liquid Packing Machine

Automatic liquid quantitative packaging machine with double rod structure, which is reliable in performance, also has special adjusting structure deviates from the heart, can adjust the filling quantity when walking bag, on the species also have both quantitative pump and self-priming pump, the user can choose according to their own actual situation.

Liquid filling machine, liquid of quantitative packaging machine is high, it is very convenient to operate, all packing procedure is a one-time, machines are now up to the hygiene standards, can be at ease use

It can be used in everyday life, such as soy sauce, vinegar, edible oil, juice, milk, etc

Feature:

Packaging process can be automatic, bag, quantitative filling, etc. High stability, a small and easy to operate, the technological process of the machine parts, is made of stainless steel, machine is very stable, adjustment is convenient, use rise also look more good-looking appearance. Included in the packaging production date is also on the use of ribbon code, fully automated process, improve the efficiency of enterprise's production.

Parameters:

Aliquot speed	15-30times / min (depending on materials and different aliquots weight)
Scope	general particulate material
Dimensions	43 × 45 × 165cm
Voltage	220V -50HZ/110V-60HZ
Power	220W
AliquotWeight	2-100g/2-200g
AliquotAccuracy	0.2g
Weight	80kg
PackagingMaterial	PP,filterpaper,aluminium foil bag
