

Automatic Flow Wrap Bread Packing Machine CK-ZS320

The automatic bread packing machine adopts servo control and introduces reciprocating end sealing and cutting technology. High speed, high precision, high stability. And the touch screen makes the operation simpler and more intuitive.

Bread Packing Machine Features:

- Through the servo motor program control, the formula table is realized to package different products, and the package length is arbitrarily set.
- The human-machine interface touch screen can clearly realize the operation status of the equipment, the operation parameter setting, the alarm information, the simple report, and is convenient for the operator to use the automatic bread packing machine, and can realize the multi-language text switching function.
- The high-precision color-coded photoelectric tracking system can adapt to a variety of different color standards, and ensure that the sealing and sealing position of the packaged product is accurate and the printing pattern is complete.
- The easy-to-use former can quickly and easily adjust the size of different packaged products to improve production efficiency.
- The bread packing machine with built-in heat pipe sealer to increase speed, enhance sealing reliability, avoid burnt packaging materials, and reduce the loss rate of packaging materials.

Automatic Bread Packing Machine Technical Characteristics:

- ① Food grade stainless steel contacts, safe and sanitary.
- ② Double support roller structure, efficient and durable.
- ③ Feed port light detection.
- ④ No empty package design, improve packaging yield.

The bread packing machine is suitable for the packaging of soaps, biscuits, moon cakes, wafers, disposable tableware, etc. It is widely used in food, pharmaceutical, hardware, and daily chemical industries.

Model	CK-ZS320
Film width	Max 320mm
Bag width	50-160mm
Product height	Max 45mm
Film diameter	320mm
packing speed	40-230bags/min
Machine size	3370*720*1450mm
Weight	900kg
