

## *Automatic Liquid Milk Water Bottle Filling Machine*

This is an fully automatic liquid filling machine with 4 filling head. It adopt the pneumatic driven cylinder dosing unit that Automatic suction and filling liquid item quantitatively. It is suit for low viscosity liquid item such as water, wine, alcohol, liquid detergent, juice beverages (such as tea drinks, soy sauce, jam vinegar) etc.

### **Advantage:**

1. The filling capacity is controlled by piston volume, it is running quite and precision. When the bottle container is arriving at the set position, the plunger will generate precision pressure;
2. The machine configured with automatic absorbing system, the extra liquid will be absorbed into filling head, no liquid will be outside of bottle and in filing machine;
3. Driven by a cylinder and piston made from materials with one-way valves control the flow of materials;
4. This machine is compact, easy to operate.
5. The water filling machine configured with Advanced and high quality AirTAC Brand pneumatic components.
6. Some contact materials are 316L stainless steel materials, in line with the GMP requirements.
7. Widely used by industries of food & beverage, cosmetics, personal care, agricultural, Pharmacy, and chemistry.
8. We offer whole liquid filling machine production line machine, together with bottle unscrambler machine, bottle labeling machine, bottle capping machine, bottle shrink wrapping machine for consumer option. This will be much higher production efficient.

**Parameters:**

Filling capacity	200-1000ml (adjustable)
Filling speed	40-80 bottles/min
Powder supply	0.5Kw, AC220V, 50Hz
Pneumatic supply	0.6-0.8MPa
Machine size	200cm*95cm*150cm
Machine weight	360kg
