

Drum Bagging Machine TD-02 Bag Packaging Machine

The machine can greatly reduce the cost of labor, materials and use of the site, simple operation and easy adjustment.

It can greatly improve efficiency and reduce labor costs when used in conjunction with assembly lines.

This machine is suitable for packaging of various food raw materials, chemical raw materials, oil raw materials, pharmaceutical raw materials and other industries.

Features

The plastic barrel bagging machine is a special equipment for covering plastic bags inside plastic barrels. 5-6 bags can be bagged per minute, with strong stability. The machine has an independent control panel, which can be started with one key;

This equipment adopts reverse bagging technology. The bag is first stretched out and sleeved outside the barrel, and then the film is pressed into the plastic barrel by the box pressing mechanism to complete the inner bagging of the plastic barrel;

Technical Parameter

Machine model	TD-02 drum bagging machine
Power supply/power	220v 50Hz 800W
Applicable size	φ200-350mm height 200-400mm
Sealing speed	4-8 barrels/minute
Table height	600mm
Film width	230-400mm M-folded film tube
Use air source	6-7kg
Machine size	2350*1590*1850mm
