

## DPP-250FI Automatic Blister Packing Machine

PVC mechanism forming, special automatic feeding, PTP alu foil plate sealing, perforation, embossing and blister cutting. Suitable al/pvc & al/al blister packing for tables, capsules, irregular tablets, etc.

## Characteristic:

- 1. DPP-250F1 Blister Packing Machine could fission pack to enter lift and division cleaning workshop, adopt column pin location, bolt-fixation, easy to serial production.
- 2. The die locate day location pin with precision, and press-board dress up.
- 3. Main motor adopt frequency control: (punch frequency is 50 times/min). It can enact corresponding punch frequency according to travel and full feeding easy or hard factor.
- 4. Adopt engine-hand nip draw station, running steadily, synchronization nicety, change travel and design the plate size at will on the range of 20-120mm.
- 5. Forming and heating plate close and open automatically, it could protract time to boot-strap after put down heating plate, limit wasting material less than one edition.
- 6. Air bed sealing, net-plate is hoisted by cylinder while stop. Avoid making blister metamorphose by heat radicalization while settling, easy to clean the net-plate also, at the same time, play the role of buffer when over pressure, is propitious to prolong machine usage life.
- 7. Up-lower net-plate male and female work in heat-sealing, there are punctuate net-veins on the positive and negative (could line-pressurize also). Because two side stress are equality, make plate more level-up, improve pressurize capability as well.
- 8. Alarm and stop while PVC is out and discretion, easy to replace and add PVC on time for work man.
- 9. The feeding parts directly contact with product adopt STS316 stainless steel, other machine parts or frame are fabricated by STS304 stainless steel and accord with "GMP" request.

## **Technical Parameters**

Punching speed	20-50 strokes/min
Capacity	80-200 blisters/min
Range of Stroke	20-120 mm
Packing material	Pharmacy PVC: (0.2-0.5)×250mm
	PTP alu foil: (0.02-0.05×250mm
Using requirement	Clean compressed air with 0.5~0.7MPa pressure.
	Air consumption ≥0.3m³/min
	Power: 380V 50HZ (220V 60Hz) 7.5KW
	Water chiller for moulds: Tap water or recycle water with 60L/h consumption
Overall dimension (L×W×H)	3390×650×1650 mm
Net weight	1700KG
