

Complex Fluid Bed Dryer FBDD-S

Features:

1. The multi-functional design for spray granulation and pellet coating.
2. External spray gun is easy to be observed and adjusted.
3. The rotary table design makes the coating uniformity and high roundness, particle damage will not happen.
4. High permeability, drying rate is better than centrifugal coater.
5. Rotary table of different air permeability is changeable according to different process condition.
6. Solution volume of the spray gun can be adjusted according to the loading capacity.
7. Easy to discharge.
8. Coated pellet density is higher than the bottom spray (WURSTER).
9. Pellet coating procedure is faster than bottom spray coating (WURSTER), less material loss.
