

Protab 300 - Small and Medium-Scale Tablet Compression Machine

Best suited for pilot, small & medium-scale production batches, the Protab 300 ensures high uptime with quick changeover. Aided by digital supplements for feeder height adjustment, the Protab 300 has a longer life, all the while ensuring greater savings thanks to its sophisticated design that leads to minimal leftovers (50 gms.) in the feeder. An ergonomically designed machine, the Protab 300 has an illuminated pharma zone and a 19-inch multi-touch HD display with intelligent GUI. Built with a user-centric design philosophy, the Protab 300 offers best-in-class ergonomics. The Protab 300 also offers single tablet sorting capabilities with auto weight correction even at speeds such as 100 rpm for consistently high-quality production.

With new range equipment such as the Protab 300, ACG-Pam is looking at expanding its portfolio of tableting machines, stretching the limits of pioneering new designs and technologies, while offering greater OEE and lower TCO.

Features

- High uptime with feeder movements in less than a minute
- Longer life aided by digital supplements for feeder height adjustment
- Greater savings from minimal feeder leftover (50 gms.)
- Ergonomic design including an illuminated pharma zone
- High-quality auto weight correction with single sorting at 100 rpm
- Changeover ready in best-in class time
- Instamend™ Technology for higher uptime
- 19-inch multi-touch HD display with intelligent GUI
