

## *TD-03 Automatic Lifting Bag Sealing Packaging Machine*

The automatic bag-sealing packaging machine is a cutting-edge product independently developed and designed by our company according to market demand.

After the bagging machine wraps the film bag and packs the product, the machine can pull the film bag up, unfold and arrange it, and then perform operations such as folding the lid, vacuuming, and heat sealing.

The action of the machine is completed by the cooperation of the servo motor and the cylinder. The advantages are fast, stable, simple to operate and easy to adjust. The use of this machine in conjunction with an automatic unpacking and packing machine can greatly improve efficiency and reduce labor costs. Suitable for packaging of various foods, chemicals, electronics, stationery, plastics, hardware, screws, beverages, toys, etc.

### **Features**

- It can be used with equipment such as front-end automatic cartoning and back-end automatic carton sealing.
- There are a variety of ways to enter the carton
  1. Vacuum and heat seal the bag after folding the lid;
  2. Tie the bag after folding the cover and hinge;
  3. After the bag is folded and hinged, it is directly pressed in without sealing or tying the mouth.
- It can be matched with different equipment and suitable for various packaging methods.
- Simple operation and easy adjustment.

## Technical Parameter

<b>Machine type</b>	<b>TD-03 Automatic lifting bag sealing packaging machine</b>
Power supply/power	220v 50Hz 800W
Applicable carton	L250-450 W200-400 H150-400mm
Sealing speed	1-3 boxes/minute
Table height	600mm
Film width	400/600mm M-folded film tube
Use air source	6-7kg
Machine size	2600*1 650*1750mm
