

DC-338-1 High-speed Packaging Machine for Liquids, Pastes, Granules, and Powders (three-or four-side seal)

The DC-338 series machinery is a roller-type packaging machine for automatic forming, filling, and sealing of liquid, viscous (cream, sauce, etc.), powder, and granular materials. This machine can achieve three-side or four-side sealing packaging.

This machine adopts an advanced industrial computer control system, which can easily and accurately achieve a large increase or decrease in bag size and adjustment changes in packaging speed. The LCD touch screen can complete the setting of most functions, and the optional various language prompts make the setting operation simple and clear.

The sealing uses a roller method. The longitudinal sealing pattern uses a checkerboard pattern with a leak-proof line, and the transverse sealing pattern uses a checkerboard pattern with a leak-proof line or a flat seal with a leak-proof line.

The machine is also equipped with an easy-tear device for convenient bag opening.

The cutting knife can use one of three methods: a flat knife, a serrated knife, or a dotted line knife.

Technical Parameters

Model	Feeding System	Roller	Applicable Materials	Packaging Speed	Bag Making Size
				(Varies depending on materials and packaging materials)	
DC-338-1	Sea霸Pump	Three Pairs	Shampoo, shower gel, cream, lotion, facial mask mud, honey, etc.	30-80 bags/minute (pcs/min)	Width
DC-338-2	Magnetic Pump	Three Pairs	Perfume, toner, vinegar, wine, oil, etc.		40-85mm
DC-338-3	Rotor Pump	Three Pairs	Ketchup, chili sauce, plum sauce, etc.		
DC-338-8	Pneumatic Rotor Pump	Three Pairs	Ketchup, chili sauce, satay sauce, etc.		Length
DC-338A2	Measuring Cup	Two Pairs	Sugar, powder, seasoning, etc.		40-120mm or 70-160mm
DC-338A3	Screw	Two Pairs	Coffee, milk powder, medicine powder, seasoning powder, etc.	30-120 bags/minute (pcs/min)	(Optional)
