

Liquid Package Machine ES-5000

The equipment in the first generation of bagged water filling machine basis after repeated many times to try to improve. The main unit is composed of frame, film feeding into the membrane system, traction institutions, flushing film sterilization equipment, up device, heat sealing eager device, built-in refueling system, filling equipment composition. The machine adopts stainless steel materials refined but become, in line with the state drinking water production standard. Each process by matsushita PLC control center through the touch screen using computer program according to the design requirements to accurate finish. The film has run by automatic adjusting device, film length measurement adjustment device, multichannel sterilization treatment, low noise, high precision imported appliances, filling, sealing unique health firm, torn bags or less rate of 5 ‰, no leakage, convenient operation stability, is the current water production in the most ideal equipment.

Model	ES-5000
Packing	Automatic forming packaging
Power supply voltage	380/220 50HZ
Power	3.5KW
Production capacity	400B/H
Finished width	550ml
Packaging capacity	3-5 L
Weight	700kg
