

NJP-2 -200C Automatic Capsule Filling Equipment

Features

1. This automatic capsule filling equipment improved the internal design of turn plate, adopt with original Japanese linear bearing to ensure the precision and service life.
2. The machine is designed cam behind and the pressure spray oil pump is added to lubricate the cam, cut the abrasion and extend the service life of spare parts.
3. PLC Speed control by frequency variation, LCD screen display makes operation more convenient.
4. The automatic capsule filling equipment adopts with 3D adjustment structure and the even gap which makes calculation accurate.
5. Automatic capsule filling equipment made by China manufacturer with security device, it will automatically stop when out of material. This makes the equipment steady and safe.

Machinery Characteristic

1. Smooth and sophisticate operation, safe and reliable.
2. High filling precision
3. PLC Speed control by frequency variation
4. New enclosed structure, meet the requirement of GMP.

Parameters

Output	200 capsules/min
No. of Segment Bores	2
Suitable for Capsule	00 to 4
Total Power	3kW
Overall Weight	700 kg
Overall Dimension	700mm×800mm×1700mm
