

JY-350C-HSI Sandwich Ice Cream Making and Packaging Machine

Main performance & characteristics

Machine with compression machine, suitable for 7800pcs/hour compression ice cream production line. The machine is made of stainless steel, completely restless and waterproof, more suitable for use in humid and other bad working conditions; bag length is accurate in cutting, frequency conversion control and stepper motor drive are combined, for direct connection with loop mechanical arms on compression production lines, and automatic materials separation is made for perfect combination with a production line. To high-capacity production lines, double compression units are used, and two corresponding packing machines are needed, with one needs a longer transmission rack.

Using range

Usually match with Quick-frozen ice cream tunnel, can make the sand witch ice cream machine during packing.

Technical parameter

Packing speed (bag/minute)	30-200
Packing size (mm)	L150-250 W35-100 H20-50
Maximum width of film (mm)	350
Power	2.25KW
Power	1.5KW
Rated voltage	220V/50HZ
Rated frequency	50HZ
Weight of the machine	1000KG
