

Automatic Weigh Filling Machine for Nuts, Candy, Salted Olive and Fruits

Overview:

This production line is suitable for automatic canning, labeling of nuts, candied fruit, melon seeds, jams, roasted seeds, nuts, salted vegetables and fruits etc. The production line is fully automatic from bottle feeding, automatic quantitative filling, sealing, plastic cover pressing, labeling and coding, which greatly saves manpower and improves production efficiency. According to the needs of users, it can also be equipped with a liquid injector to produce salted vegetables and canned fruits.

This production line consists of the following equipment's:

1. Bottle unscrambler
2. Combination scale
3. Servo screw positioning feeding
4. Working platform
5. material elevator
6. Sealing machine
7. Automatic capping machine
8. Soft cover capping machine
9. Round bottle labeling and coding machine

Performance and characteristics:

1. It is specially used for weighing, sealing and labeling of products.
2. Effectively improve the packaging structure, making solid and liquid products easy to use and beautifully packaged.
3. The automatic canning bottling line solves the shortcomings of the old-fashioned manual canning mechanism, unsmooth bottle feeding, inaccurate sealing and labeling etc. it saves labor and improves productivity.

Technical parameters:

- Voltage specification: AC380V/AC220V 50/60HZ
- Power consumption: 5.5W / hour
- Weighing speed: 30 bottles / min (depending on bottle size and capacity)
- Applicable container range: 20-2000 grams (customized according to specific requirements)
- Dimensions: 9000*4000*3600mm
