

OC-250H High Speed Shrink Wrapping Machine

L-type High Speed Shrink Wrapping Machine is a fully automatic unattended wrapping machine, including automatic film feeding device and manual adjustment of punch guiding system and manual adjustment of feeding conveyor platform, matching with the packaging line. This machine can realize automatic feeding, bag forming, sealing, cutting and shrinking. It is suitable for products of different widths and heights, and also has the function of sealing, specially designed for packaging small products.

High Speed Shrink Wrapping Machine is widely used in mass production packaging line with high working efficiency. It is equipped with inspection photoelectricity, one set of horizontal and one set of vertical inspection, which is easy to switch, and it can easily complete the sealing and packaging work for thin and small packages. When the package size changes, it is very easy to adjust without changing the mold and bag maker. In addition, the equipment adopts the original digital display temperature controller with built-in PID function, the sealing knife temperature can be set at will, so you don't have to worry about the temperature hurting the product.

Application:

It is widely adapted to the printing, mobile phones, electronic cigarette, electronic products, food, box, greeting cards, photo albums, picture frames, pharmaceutical, cosmetic, cosmetics, floor, ceramic, beverages, metal and other high-volume shrink packaging industry. Single machine for different height and width of the product.

Technical specifications:

Model	OC-250H
Name	Shrink packing machine
Packing speed	20-40bag/min
Mouth size	1000X450X250mm (L*W*H)
Max.dimension	width≤400 heigh≤200
Power	380V/9KW
Machine dimension	1400X715X1455mm (L*W*H)
Weight	180KG
