Turntables

Unscrambling, Transferring, and Accumulation Tables

SaintyCo Rotary Turntables are manufactured to increase the efficiency of any production line. Our Loading or unscrambling Turntables transfer single filled bottles onto a conveyor, enabling operators to maximize production capacity. Accumulating Turntables remove finished products from the active conveyors and assist in efficient packaging into shipping containers.

Our turntables are constructed from the highest quality stainless materials with variable speed drives, reversible rotation, and are height adjustable. Turntable tops are polished stainless steel and they're laser cut to create a perfect circle.

UNSCRAMBLING TURNTABLE:

The unscrambling turntables are designed to load your containers onto the filling machine line. Turntables can be added to your existing line or purchased with a complete filling system. Turntable tops are available in polished stainless steel or polyethylene. They are cut to create a perfect circle. They are adjustable up to 4 inches. Our Unscrambling turntables are powered tables that unscramble and load bottles onto the conveyor. Our turntables are constructed from the highest quality stainless materials with variable speed drives, reversible rotation, and are height-adjustable.

TRANSFER TURNTABLE:

The Transfer turntables are designed to move your containers from one conveyor to another in your packaging line. They can be added to your existing line or purchased with a complete filling system. Turntable tops are available in polished stainless steel or polyethylene. They are cut to create a perfect circle. They are adjustable up to 4 inches. Our turntables are powered tables that load, unload and transfer bottles to and from the conveyor. Our turntables are constructed from the highest quality stainless materials with variable speed drives, reversible rotation, and are height-adjustable.
