

DP-25 Single Punch Tablet Press Machine

DP25 single punch tablet press machine was developed with the advanced technology introduced from abroad. It is used for medicine, chemical, electronics, food and lab etc. Pressing powder or grain into tablets continuously. It's advantages are: high material utilization ratio, reasonable structure, convenient handling, small dimension, high pressure, low noise, small tablet weight difference, adjustable filling depth and tablet thickness. Each function for the machine meets the level imported machine and requirements of state medical sanitation. It is widely used in scientific research institution, medicine factory lab and hospital pharmaceutical lab. This machine adopts many new technologies which ensure the safety and standardization during the production.

Features

1. Highly sealed structure ensures powder cross pollution, meeting GMP.
2. Safe protection device and hominization design.
3. Four-pillar structure provides large operation space.
4. Outstanding bearing ability is applicable for wider using fields.
5. Integral transmission structure maintains stable and low noise operation.

Technical parameters

Model	DP-25
Number of punch die	1
Maximum tablets diameter	25mm
Maximum output	60pieces/min
Maximum pressure	50 kilonewton
Maximum feeding depth	13-20mm
Tablets thickness	0.5-8mm
Power(Kilowatt)	220V/50Hz,1.5KW
Dimension(mm)	580*500*830
Weight	150kg
Power supply	Voltage:220v+-5v Frequency:50+-1HzKilowatt:15.KW
