

## ZLT Series Lifting Mill

This equipment is mainly used in the pharmaceutical industry to sort out uniform and qualified granules that have agglomerated after granulation according to process requirements. It is widely used in pharmaceutical, chemical, and foodstuff industries. The chassis of this machine is equipped with movable casters, making it easy to move. The height of the mill can be raised or lowered according to the production process, meeting user's requirements of production processes and effectively avoiding dust and cross contamination. It can fully comply with the "GMP" requirements.

ZLT series mill machine is composed of a stationary lifting system, a vacuum conveying system and a mill system. When working, the particles in fluid-bed chamber is sucked into mill machine chamber by vacuum conveyor, and the particles are discharged into the hopper through the discharge port of draft tube after being impacted, squeezed and sheared by mill blade in mill machine chamber.

### Features

The chassis of this machine is equipped with movable casters, making it easy to move. The height of the mill can be raised or lowered according to the production process, meeting user's requirements of production processes and effectively avoiding dust and cross contamination. It can fully comply with the "GMP" requirements.

### Parameters

Equipment Model	ZLT100	ZLT200	ZLT450	ZLT700	ZLT1000
Mill Power	0.75 kW	1.1 kW	3 kW	4 kW	5.5 kW
Mill Capacity	100 kg/h	200 kg/h	450 kg/h	700 kg/h	1000 kg/h
No. of Screen Mesh	5~30				
Weight	310 kg	320 kg	400 kg	600 kg	700 kg
