

## *GX-200 Capping Machine*

GX-200 the straight line type capping machine is applicable to the rotation of the plastic bottles, glass bottles, PET bottles and all kinds of material and shape of the bottle cover is for tablet production line and liquid filling line automatic screw cap process and design a new generation of rotary cover device. It overcomes the disadvantages of slow rotating speed of the batch type capping machine, small cap and small scope of application, and is also superior to the limitation of the application scope of the rotary capping machine and frequent replacement of the mold.

The company can accord customer demand and the lid of the specifications, for the device to enhance the matching or oscillation automatic sorting, an upper cover system to meet requirements of customers for the automated production. And can be customized for the customer pump head, cover, cover, such as special cap capping machine.

### **Technical parameter:**

<b>Model</b>	<b>GX-200</b>
Capacity(b/m)	30-200
Diameter of bottle (mm)	30-120
Height of bottle (mm)	50-250
Cap feeding	manual
Power(kw)	1
Air pressure	0.4-0.6
