

## Semi Automatic 2 Cavities Bottle Molding Machine HM-1500

Bottle blowing machine is a kind of equipment which can make plastic granules into hollow containers by blow molding process. It is mainly used in beverage and food industry.

### Advantages:

1. Excellent Mechanical Strength, impact-resisting, and non-cracking.
2. Bottle mouth and thread are of precise measurement.
3. Plastic Medicine Bottle's safe thread can be molding directly.
4. The size and weight of the product can calculate and design clearly and meet the requirement of the design without any deviation.
5. The surface of the bottle mouth, neck and the body is good luster and smoothness, the standard of bottle body is unity.
6. The joint seam on the bottle body is smooth, no scrap rubber.

### Technical Parameters:

| Model                    | HM-1500               |
|--------------------------|-----------------------|
| Machine type             | One heater+two blower |
| Cavity                   | 2+2                   |
| Capacity(500ml/bottle/h) | 1200-1600             |
| Bottle volume            | 0.2-2L                |
| Max diameter*height      | ϕ 90*320              |
| Weight                   | 1000kg                |
