

## Accumulating Overwrapping Machines W4201N

The W4201N can overwrap items in multiple columns and rows that are accumulated and transferred from pre-process. This model designed for pharmaceutical industries based on the experiences of typical carton size, accumulating patterns or packaging processes. Size change for different items to be overwrapped can be completed in just 20 minutes. Since the W4201N is capable of handling a thinner-type film, it reduces the volume of film used and thus helps to reduce costs too.

### Wrapping Specifications:

<b>Wrapping object size range</b>	Length	60 - 200mm
	Width	60 - 320mm
	Height	20 - 80mm *High-speed model : 20 - 50mm
<b>Wrapping Speed</b>	Max.40ppm
