

Volumetric Fillers

Free flowing products like spices, rice, snacks, pulses and other materials are filled and packed in industries with the help of volumetric fillers. The moving disc of this filling machine can be continuous or intermittent. The filling unit can be adjusted as per need for making packages of different volumes. The stainless steel machine is durable and easy to use. The material used for the filler should be non-sticky. Vista techno pack machines bring you the best volumetric fillers for making the work of filling materials effortless and easy. The machine can fill lightweight packages of ten grams up to heavyweight materials of twenty-five kilograms. The working capacity of the filler is quite fast and it can fill a large number of packages in an hour. If more production is required in the factory, more heads can be added to the machine. This increases its output capacity thus improving the production and packaging quantity.

Product Details:

Brand _____ VISTA
Capacity _____ 25BPM
Power Consumption _____ 1.5Kw
Machine Type _____ Semi-Automatic
