

HW-7072 Fully Automatic Thermoforming Negative Pressure Integrated Machine

This machine adopts vacuum forming, equipped with automatic punch trimming function and conveyor belt stacking (three-station optional) function.

This machine uses a hydraulic device with 60 tons cutting force, which is strong and has a long life.

The whole machine parts are made of hard chrome on the surface to prevent rust.

The heating part of the machine is fully sealed to prevent temperature difference from being caused by external factors.

This machine adopts double-tube vacuum synchronization function, and the vacuum walkway is added to make the product molding more perfect.

Technical Parameters:

Model	HW-7072
Forming length	700mm
Forming width	450mm-720mm
Forming height	150mm
Suitable sheet thickness	0.25mm-2.0mm
Productivity	About 6-12 cycles/minute
Heating oven	Upper furnace (two sections of heating, the first section of preheating, the second section of heating) Side back
Power supply	AC/three-phase 380V/50HZ (three-phase five-wire)
Total power	48KW
Dimensions	L9m×W2.5m ×H2.68m
Weight	4500KG
