

SRH type double-door thermal wind circulating oven

Purpose and brief

This machine is applied in the sterilization, drying of the various plastic plug, aluminum lid and antibiotic bottles. Heat with the stainless electric heating pole and thermal wind circulation by straight fanner machine. The temperature rises quickly with efficient sterilization. The machine can automatically show, set controlling, record temperature, and offer in-time alarm for over-temperature and over-time.

Main technique parameters

Production ability: according to the customer's requirement

Temperature range: 50°C~350°C (or 50°C~140°C)

Time range: 0~24h

Power supply: 380V 50Hz Three-phase four-wire

Power: ≤18Kw (or 2kw)
