

Flow-Type Filling Machine

This flow-type filling machine is the main part of filling lines of disinfectants, pesticides, oils and drinks, and it is mainly used for filling large-volume bottles of more than 200ml.

Positive displacement flow filling mode is designed for it, and it is fitted with touch screen. With PLC control, it is easy to adjust its loads. Besides working independently, it can work together with capper, labeler, and other machines to make up a production line.

Features:

1. Stable performance, good filling control capacity, no leakage, small space occupation, and high filling speed.
2. One-button operation mode ensures its control easy.
3. No need for special maintenance. And with many detachable parts, it is quite easy and convenient to maintain.

Main Parameters:

Production Capacity	Four heads 1200~2400 bottle/hour
	Eight heads 2400~4800 bottle/hour
Bottle Size	200ml or more
Package Accuracy	+ -1%
Air Consumption	5m ³ /h
Power	1.5KW
Electric Supply	220V/50hz
Size	3000×900×2100
